Prospective customers

Carpets are heavy and not easy to handle. This can result in serious problems with the working environment at dealers and wholesalers within the carpet industry.

The solution shown on the photo is a Logitrans SEHS with carpet spear. In order to increase safety, it is fitted with prolonged legs and counterweight. The maximum lifting height of the spear is 3300 mm, and the lowered spear height is 180 mm.

The length of the spear is 3000 mm, and the maximum length of the carpet rolls is 4000 mm.

The maximum capacity is 300 kg.

Important reasons for using **stackers** when handling carpets:

- Space-savings.
- Carpets can be handled by one person.
- Avoid back injuries of employees.
- Avoid qualified employees leaving the company, because their work is too hard.

Important reasons for using **Logitrans stackers**:

- Large turning angle of 210° ensures maximum manoeuvrability.
- Multiflex function for operations in confined areas.
- Strong propulsion motor.
- Full-electronic controller with optimum manoeuvrability.
- Short overall length.
- Easy and simple to operate and maintain.
