

## Crane arm for Logilifts & stackers

The LOGITRANS crane arm makes the handling of heavy objects for example machine tools and parts much easier to handle. The crane arm can easily and quickly be mounted on all LOGITRANS Logilifts and Stackers models fitted with a variable fork carriage.

The photograph shows the crane arm mounted on a stacker with straddle chassis. This specification gives extra stability and safety when lifting and transporting material.

The crane arm is fitted with a chain and hook. **The length of the chain is adjustable** and is mounted in a way that makes it easy and quick to adjust.

The crane arm is easy to replace with one of the many fork options LOGITRANS equipment offers. **This means your Logilifts and LOGITRANS Stackers can still be used for normal lifting purposes.**
