

GET THE PERFECT MATCH TO YOUR SPECIFIC SITUATION

CUSTOMISED SOLUTIONS

Logiflex stacker with V-forks

Customised solutions

Finding the right solution for your material handling processes is important if you want to increase productivity at your workplace.

Sometimes it takes a few adjustments or a special add-on or function, while other situations require a unique, customised solution to match your specific requirements.

We care about finding the right solution for our customers to optimise their material handling processes. Therefore, we customise our solutions down to details to fit your specific needs.

With focus on high quality and flexibility, our competent development team is experts within adjusting our standard products to a given situation.

We make adjustments in terms of different materials, fork sizes, lifting heights and much more.

In addition, we can adjust technical specifications and functions to specify or expand the application of the product.

All our customised solutions are based on our standard product range of high quality and flexible handling equipment. We never

compromise on safety or quality - no matter the complexity of the solution.

Get inspiration from some of our previous customised projects or contact one of our area sales managers if you have a specific situation you need a solution for.

Unique customised solutions

Rotator with a chute

Customers in various industries prefer to have a chute added to their rotator.

This enables you to easily and efficiently empty or pour the content of a box or crate into another container with no waste and no physical efforts.

A highly valued ergonomic solution for emptying boxes and crates.

Logitilt with extra support

This customised Logitilt was produced for a customer within logistics.

The customer needed an efficient and ergonomic solution to lift and tilt boxes in their logistics area. Also, it was important that the tilting angle could be adjusted during filling and emptying of the boxes.

This Logitilt has special box holders to support the boxes when tilted. It is equipped with a cable remote control for adjusting tilting angle and a removable handle to enable easy access to the boxes.

The emergency stop has been relocated to the chassis.

Logiflex drum handler

A customer in the pharmaceutical industry needed a compact and unique solution to grab and lift special drums from shelves in a narrow space.

The solution - a Logiflex mini with a special drum lifter - has a shortened chassis, 2 x 50 kg., counterweight and 10 degree tilt to meet the requirements.

Stainless unit for CSL Behring

- loyal customer since 1993

A stainless stacker to ensure good ergonomic working conditions for the employees of the pharmaceutical company CSL Behring. This unit operates in clean rooms, where it automatically raises/lowers pallets to proper working heights to load/unload.

Fully powered Rotator with straddle legs and special clamping function for reels

A customer in the printing industry needed a solution for handling long and heavy reels.

This customised Rotator can take reels up to 200 kg and 2200 mm length in vertical position and turn into horizontal position. An axle is then positioned in the reel to place it in a printing machine.

It can also handle reels placed on a pallet in horizontal position, due to the customised short legs, which allow it to drive close to the pallet. In this situation, the reel is rolled from the pallet into the clamps, and then turned to the vertical position and placed on the floor.

This is a huge advantage and improvement for the customer, as the 200 kg heavy reels previously were manually turned from vertical to horizontal.

Customised stacker Inox

A special electric stacker for the pharmaceutical industry to lift heavy mixing vessels for cleaning.

The solution has short legs and extra strong forks to ensure a high level of safety. In addition, it has an adjustable lowering valve to lift and lower the vessels safely and carefully.

To meet the requirements for high sanitation in clean environments, the solution was delivered with "Pharma finish".

Hospital bed tilter

A special hospital bed tilter to help service operators in the healthcare sector.

It can be difficult for the service operators to move and lift the beds and access the underside.

This customised bed tilter was sent off to a hospital in Strasbourg to ensure the service operators to perform safe and efficient maintenance of the many different hospital beds.

The tilter has a variable rear console to be able to handle hospital beds of different sizes. It has special clamps to maintain the beds safely in position, when tilted vertically, and a foot brake to stabilize.

Also, the forks and rear console are covered with nylon to avoid scratches and damages.

Partly stainless steel unit for Nestlé

A Logiflex stacker with stainless steel fork chassis and backrest for improved support and safety. The unit operates in Nestlé's production area, where it transports trolleys with trays of biscuits. The stainless parts are to avoid paint contamination of the trolleys.
